Seed Definitions

The same four plans are defined in src/lib/seed-data.ts, prisma/seed.js, and prisma/seed-pilot.js. Values are currently aligned, but duplication creates drift risk.

Final Recommendation

Four plans exist. Starter and Growth are closest to production-ready, although feature text should match actual capability. Multi-Branch and Premium are not fully production-ready because price is AED 0 and several listed features are future or overlapping.

For pilot and first commercial launch, simplify public packaging to three plans and keep Enterprise or White Label as manual/internal.
